Bison Binary

This activity was created by Robyn

Have YOU seen a bison?

How much do you know about them?

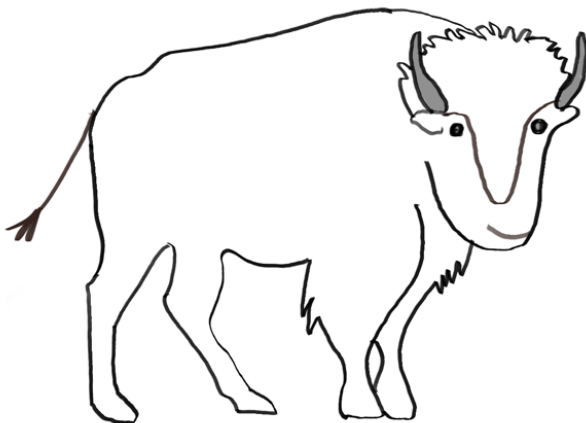

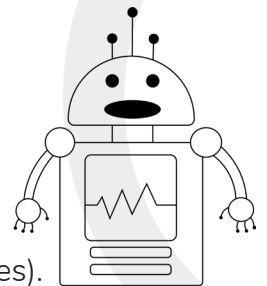

Are you ready to put your bison knowledge to the test?

For each fact about bison, shade in a 1 if you think the answer is true, or a 0 if you think the answer is false. After you're done, you can check the answer key to see if you're right!

1 **0**

- Bison have paws.
- Grown bison are small.
- Bison are slow movers.
- A baby bison is called a calf.
- Although they are hefty in size, bison can swim!
- Bison are the largest mammals found in Manitoba.
- You can judge a bison's mood by the way its tail is swinging.
- A bison gets all its nutrients from eating plants (bison are herbivores).

To a computer, the world is understood in **binary**: everything must be broken down to either a "true" or a "false" statement. In computer language (binary code), a 1 means "true" and a 0 means "false".

Bison have been very important to Indigenous peoples within Manitoba. They have been used as food, to create tools and other supplies, and even to make musical instruments!
