

Help Save the Beaver!

This activity was created by Alora.

Some animals need specific things to survive! For example, fish need water to survive; they can not live without it. A really cool animal found in Manitoba is a beaver! Check out the things that are good and bad for beavers below and use that to complete the maze on the next page!

Good Things For Beavers

Home: beavers tend to live in marshes or ponds and in areas with a lot of trees.

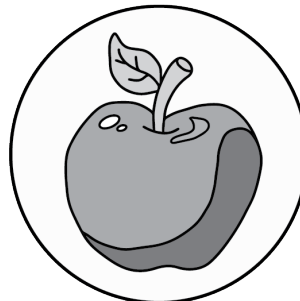

Pond

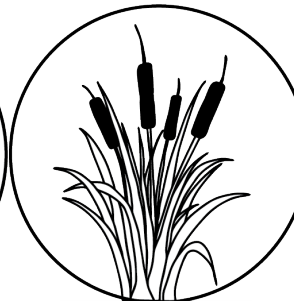

Tree

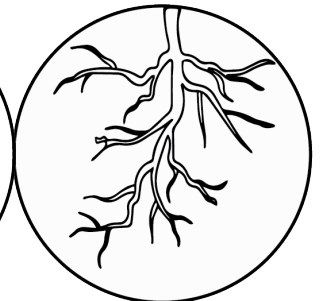

Food: beavers are herbivores so they only eat plants like apples, cattails and tree roots.

Apple

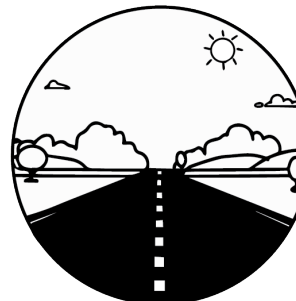

Cattail

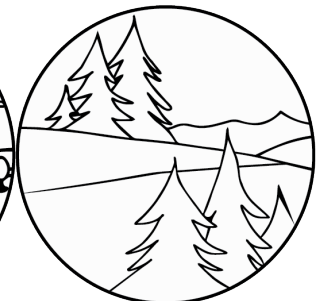

Tree Roots

Bad Things For Beavers

Places: Tundra is a bad place for beavers to live because there's not enough trees. Roads and highways are dangerous for beavers; they don't know to look both ways before crossing.

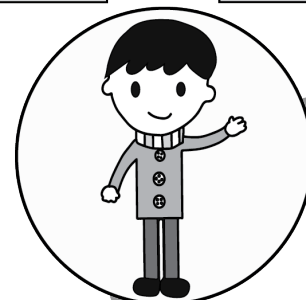

Roads

Tundra

Predators: Humans are bad for beavers because they hunt them for sport. They also cut down the trees they need to build their homes. Other animals that are bad for beavers are wolves and bears because they eat beavers.

Human

Date: _____

Name: _____

Help the beaver find his way through the maze. Make sure to collect all of the good things for beavers and avoid all of the bad things.
