Structures in Nature

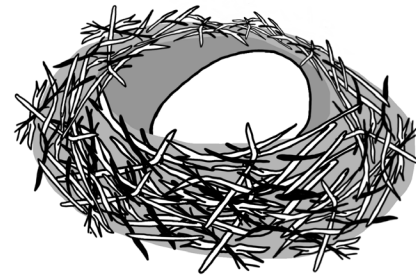

This activity was created by Brenna.

Humans build and create a lot of different structures. These are designed to be strong and stay stable when there are forces applied. Did you know that animals use structures too? These structures are for protection and shelter, and a few examples of natural structures are included below!

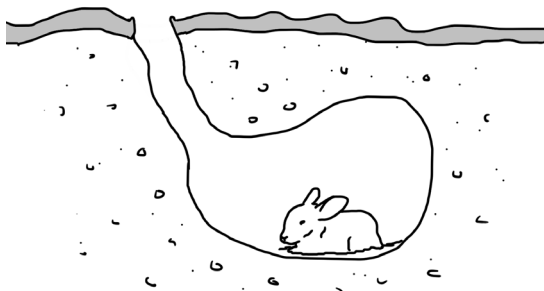

Esiw here ... my letters are all scrambled!
Can you help me by debugging the data to
show what some structures in nature are
called?
